SUMMARY

Software Developer with 3 years of experience building and maintaining package-based applications and business systems. Strong background in C# .NET as a primary language, with additional experience in C++ for performance-focused components. Skilled in web development and low-code platforms, delivering practical internal solutions that improve workflows and operational efficiency. Comfortable working across the full development lifecycle, from requirements analysis to deployment and support, with a focus on clean, maintainable code and reliable system performance.
